Job Market Paper

Optimal Monitoring Hierarchies under Collusion.

This paper explores how organizational structure influences the effectiveness of monitoring in firms, particularly under the threat of collusion between agents and monitors. Traditional models in contract theory often assume truthful reporting under high detection probabilities, overlooking complex collusion dynamics. Departing from this view, the paper proposes a novel firm design approach that allows the principal to

assign two monitors to each agent and ties their compensation to the full set of reports, reducing collusion incentives. The model extends the principal supervisor agent framework to a continuum of agents with private productivity levels and considers how the number of monitors affects detection, costs, and incentive structures. It highlights trade-offs in monitoring intensity and shows how heterogeneity in detection likelihood can shape optimal monitoring schemes. I show that *collusion risk reshapes the optimal organizational structure*. When collusion is a concern, the optimal design no longer minimizes redundancy —it leverages it as an anti-collusion device. These findings provide insights into monitoring and wage structures and explain industry-specific monitoring practices, offering a novel perspective on the design of organizational incentives.

Working papers

Feed for good? On the effects of personalization algorithms in social media platforms, with [Miguel Risco](#).

This paper builds a theoretical model of communication and learning on a social media platform, and describes the algorithm an engagement-maximizing platform implements in equilibrium. This algorithm overexploits similarities between users, locking them in echo chambers. Moreover, learning vanishes as platform size grows large. As this is far from ideal, we explore alternatives. The reverse-chronological algorithm that social platforms reincorporated after the DSA was enacted turns out to be insufficient, so we construct the “breaking-echo-chambers” algorithm, which improves learning by promoting opposite viewpoints. Finally, we advocate for horizontal interoperability as a regulatory measure to align platform incentives with social welfare. By eliminating platform-specific network effects, interoperability incentivizes platforms to adopt algorithms that maximize user well-being.

A Model of Punitive Voting. *Submitted.*

I analyze a two-period model of political competition where voters care about candidates’ integrity. Candidates must trade off implementing their preferred policy against maintaining their electoral promises. Voters punish candidates that deviate from electoral promises by voting for their opponent. I find that punitive voting can exert political discipline only if candidates face low levels uncertainty about voters preferences. In this case candidates’ electoral promises are a compromise between their preferred policy and voters’ preferences, and when elected they implement their promise. Finally, I show that when one candidate’s ideal policy is closer to the median voter, an equilibrium exists where one candidate is disciplined and the other is not.

Work in progress

Balancing Sectoral Efficiency and Competition: Optimal Public Procurement Allocation, with [Basile Grassi](#) and [Santiago Iglesias](#).

Media Competition in Spain, with [Luis I. Menéndez](#)

Visiting Positions

- Paris School of Economics. April 2025.
- Paris School of Economics. March-June 2024.

Teaching Experience

As Instructor

- **An Intermediate Course in Mathematics and Statistics**, Master's Degree in Data Science: Data Science for Decision Making, Barcelona School of Economics, Spring 2021, Spring 2022 & Spring 2023.

As Teaching Assistant

- **Behavioral Economics**, M.Res in Economic Analysis (IDEA), Universitat Autònoma de Barcelona, Spring 2025, taught by Prof. Peter Bayer.
- **Optimization**, M.Res. in Economic Analysis (IDEA), Universitat Autònoma de Barcelona, Fall 2024, taught by Prof. Fernando Payro-Chew.
- **Microeconomics II**, M.Res. in Economic Analysis (IDEA), Universitat Autònoma de Barcelona, Spring 2024, taught by Prof. Esther Hauk.
- **Microeconomics I**, M.Res. in Economic Analysis (IDEA), Universitat Autònoma de Barcelona, Fall 2023, taught by Prof. Xavier Vila.
- **Probability and Statistics**, M.Res. in Economic Analysis (IDEA), Universitat Autònoma de Barcelona, Spring 2022, taught by Prof. Jordi Caballé.
- **Networks: Models and Applications**, Master's Degree in Data Science: Data Science for Decision Making, Barcelona School of Economics, Fall 2022 & Fall 2023, taught by Prof. Pau Milán.
- **Networks: Concepts and Algorithms**, Master's Degree in Data Science: Data Science for Decision Making, Barcelona School of Economics, Fall 2022 & Fall 2023, taught by Prof. Pau Milán.
- **Game Theory**, M.Res. in Economic Analysis (IDEA), Universitat Autònoma de Barcelona, Fall 2022, Fall 2023 & Fall 2025, taught by Prof. Jordi Massó.
- **Optimization**, M.Res. in Economic Analysis (IDEA), Universitat Autònoma de Barcelona, Spring 2021, taught by Prof. Chara Papioti.

Seminars and Talks

- **2025:** Universitat Autònoma de Barcelona (planned), ENTER Jamboree (SSE), Barcelona School of Economics Jamboree.
- **2024:** Universitat Autònoma de Barcelona, Paris School of Economics, Universitat de València, Simposio Sociedad Española de Economía.
- **2023:** Universitat Autònoma de Barcelona, Barcelona School of Economics, ENTER Jamboree (Manheim University), Paris School of Economics, Toulouse School of Economics.
- **2022:** Universitat Autònoma de Barcelona, Barcelona School of Economics Jamboree.
- **2021:** Encuentro Red Española de Elección Social (REES).

Grants and Honors

FPI Scholarship (Since 2022) - Spanish Ministry of Science and Innovation.

Scholarship of the Ramon Areces Foundation (2016)

Academic Service

2024: Mentoring program organizer at UAB.

2022: Co-organizer ENTER Jamboree Barcelona.

2022: BSE Jamboree Coordinator.

2021-2023: [ENTER](#) Coordinator.

2021-2023: Students' Seminar co-organizer.

2015: Vice-coordinator of the Assembly of Representatives at Faculty of Economics Elected member of the University Cloister at University of Valencia.

2012: Elected member of the School Council at Faculty of Mathematics.

Languages

Spanish (native), Catalan (native), English (fluent)

Computer Skills

R, Matlab, Python, Latex, HTML
